

**NORDIC  
MEDTEST**

# Reference case, Innovation Walkthrough (Genomlysning)

Reference case presentation at Nordic Proof  
webinar 210914.

Why: “Don’t do that mistake you too!”

Test aspects are too often considered too late in innovation product development processes. Innovators therefore need early and competent walkthrough of test aspects.

Costs are saved, time-to-market reduced, quality increased, etc. with early corrections and completion of test planning.

Nordic Medtest was addressed from Digital Well Arena (Vinnova project) on behalf of innovators in their Innovation Support.

What: “Easy to describe, complex to perform!”

A test expert examines the innovation from several important aspects, in cooperation with the innovator:

- Usability
- Interoperability
- Information security
- Laws and regulations

Findings are presented in a report at a presentation meeting.

Has been performed ~10 times. For example for Care To Translate, an app for digital translation in healthcare situations.

## Testimony from Maja Magnusson, Care To Translate:

“It has been very valuable. It gave us good insights in things we had already considered in a good way, but also insights of needs when the technology is to be used at a larger scale”.

---

Nordic Medtest’s core business is to deliver complex IT test services, and has thereby built up a broad and deep competence in testing and healthcare applications, and can offer a variety of test services.
